## Abstracts

Polyaluminium chloride, also called PAC, is a new type high performance inorganic macromolecule flocculating agent. It is an inorganic polymer synthesized by aluminum chloride, aluminum hydroxide, alumina or other inorganic aluminum compounds with hydrochloric acid. Polyaluminium chloride is typically used in water treatment industry, but also has related applications in the pharmaceutical and cosmetic industries.

As an important water treatment product, polyaluminium chloride is widely used in industrial water treatment, municipal water treatment, paper making and others.

polyaluminium chloride is can be classified into two types according the product form: PAC powder and PAC liquid. Industrial water treatment and municipal water treatment are the major applications of polyaluminium chloride, taking 38.01% and 46.37% of the world polyaluminium chloride consumption in 2015.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
