Abstracts

PPO, Polyphenylene Oxide is a tough, stiff material with high glass transition temperature and high melt point giving a high heat resistance. The material also has outstanding electrical properties and resistance to acids and bases.

At high temperatures PPO maintains its good load bearing characteristics and dimensional stability. The material also has excellent dielectric properties and may be rated as self-extinguishing and non-dripping.

It is mainly used as blend with polystyrene, high impact styrene-butadiene copolymer or polyamide.

Polyphenylene Oxide also known as PPO or PPE. While modified polyphenylene oxide also known as MPPO or MPPE.

Polyphenylene Oxide is a tough, stiff material with high glass transition temperature and high melt point giving a high heat resistance. The material also has outstanding electrical properties and resistance to acids and bases. PPO resin is rarely used in its pure form due to difficulties in processing, most commercial grades are blended with polystyrene, high impact styrene-butadiene copolymer or polyamide which is also known as modified Polyphenylene Oxide, or MPPO.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Polyphenylene Oxide 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
