## Abstracts

Polyvinyl Butyral Resins (Briefly known as PVB resin) is produced from the condensation reaction of PVA (Polyvinyl Acetate) and butylaldehyde, which is a thermoplastic resin. Mostly used for applications that require strong binding, optical clarity, adhesion to many surfaces, toughness and flexibility.

Global polyvinyl butyral (PVB) resins production are mainly concentrated in Europe, North America and Japan. China polyvinyl butyral (PVB) resins production accounted for a certain share of the global polyvinyl butyral (PVB) resins market. China polyvinyl butyral (PVB) resins are mainly some low-end products.

The global polyvinyl butyral (PVB) resins production in 2015 was about 280232 MT. And the production in 2011 was about 236671 MT; the gross margin in 2015 was about 30.25%. And China polyvinyl butyral (PVB) resins production in 2015 was about 55263 MT, and the production in 2011 was 37544 MT. The main consumption region are Europe, USA and China, Europe is the largest consumption region, about 38.41% of global consumption.

Polyvinyl butyral (PVB) resins industry is highly concentrated, mainly concentrated in three manufacturers: Eastman, Kuraray and Sekisui. With polyvinyl butyral (PVB) resins demand increased, many China enterprises have been put into operation in the last few years, such as Sichuan EM Technology, Rehone Plastic, RongXin New Materials, etc. Although sales of polyvinyl butyral (PVB) resins brought a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the polyvinyl butyral (PVB) resins field. We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. In past five years, the price presents decreasing trend according to the economy development status and international competition. Also, there is decreasing trend in gross margin.
