This report studies the global Portable Ultrasound Equipment market status and forecast, categorizes the global Portable Ultrasound Equipment market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Portable Ultrasound Equipment refers to the device use the ultrasound technology, which is a kind of medical ultrasound devices with portable superiority comparing with general big ultrasound devices in the hospital.

Portable Ultrasound Equipment are often moved from one procedure area to another. This system enables clinicians to provide patient care in a wide range of clinical environments. At present, Portable Ultrasound Equipment industry is generally at a more advanced level in the foreign technology. Meanwhile, foreign companies have more mature technology, strong R & D capability, technical level is in a leading position. But foreign companies' manufacturing cost is relatively high, compared with china's companies. The manufacturing cost is competitive disadvantage, as the Chinese Portable Ultrasound Equipment production enterprise technology continues to improve, their share in the international market is increasing, competitiveness in the international market gradually increasing.

Chinese Portable Ultrasound Equipment industry has developed into a national industry with certain research and production capacity, industry product mix has gradually improved. Currently, China has become the international Portable Ultrasound Equipment large consumption country, but the production technology is relatively laggard, can only produce some low-end and middle end products. However, China companies are continuing to develop new technology, Portable Ultrasound Equipment is a chance to run after their abroad competitors, although very hard.

With the development of the technology, lots of companies enter into this industry.

Ultrasound devices can be as big as people's palm, very convenient for the usual customers. Portable Ultrasound Equipment not only can be used for the general hospital, also can be used in battleground and other places for its portable superiority. We may use it in the home, certainly some companies are trying to put it into applications, we only need a probe and a smart phone or tablet PC in the home. But it is very difficult to recognize the scanning spectra for the non-professionals. So Portable Ultrasound Equipment industry has a hopeful future, but it needs a long time to cultivate the consumption custom for the general customers.

The global Portable Ultrasound Equipment market is valued at 6900 million US\$ in 2017 and will reach 8630 million US\$ by the end of 2025, growing at a CAGR of 3.3% during 2018-2025.
