Abstracts

Potato starch is starch extracted from potatoes. The cells of the root tubers of the potato plant contain starch grains (leucoplasts). To extract the starch, the potatoes are crushed; the starch grains are released from the destroyed cells. The starch is then washed out and dried to powder. Potato starch products are essential in the food, paper, adhesives and building and textile industries.

The major manufacturers mainly concentrate in Europe, North America, Japan and China. In 2016, Europe production share took 73.5%, North American Potato Starch production share was about 6.9%, and Japan production share also took 6.4%. China took about 10.7%.
