Abstracts

Power cables are used to transmit and distribute electrical energy.

According to QYResearch's new survey, global Power Cable for Shipbuilding market is projected to reach US\$ 1038.8 million in 2029, increasing from US\$ 877 million in 2022, with the CAGR of 2.4% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Power Cable for Shipbuilding market research.

A cable is a thick wire, or a group of wires inside a rubber or plastic covering, which is used to carry electricity or electronic signals. They are made from electrically conducting materials that are secured with one or more insulation layers and carry electrical signals & aid the generation, transmission, and distribution of electric power. The major components of a cable are conductor, dielectric, and sheath. The conducting path for the electricity in a cable is provided by the conductor. The insulation helps in withstanding the service voltage and isolates the live conductor with other objects. The sheath restricts moistures to enter and protects the cables from all external influences like chemical or electrochemical attack and fire. The global cables market size was valued at \$200 billion in 2022, and is projected to reach \$365 billion by 2030, growing at a CAGR of 7.8% from 2022 to 2030.
