Abstracts

A prefilled syringe is a single-dose packet of vaccine to which a needle has been fixed by the manufacturer.

Europe has seen the fastest update of devices and currently accounts for approximately 45% of all pre-fills consumed. The US has been slower to convert from traditional syringes and vials, but this trend is reversing and the US is currently the fastest-growing market, accounting for 35% of unit volumes in 2013. Representing 5% of the market, Japan is unique in that it has been a rapid adopter of plastic devices, which account for approximately 65% of all pre-filled syringes sold in the country, whereas more than 95% of those sold in other regions are manufactured from glass.
