Precipitated barium Sulfate is a type of functional filler and it is superfine with a low oil absorption threshold, allowing for insulation and the prevention of agglomeration and flocculation, ultimately providing the benefit of improved pigmentation efficiency. It is widely used for a variety of coatings, modified plastics, rubber, elastomers, paper, cosmetics fillers. It can also be used as the battery cathode expansion rod, the glaze materials to manufacture ceramic and enamel, the surface coating agent of printing paper and coated paper, the sizing agent used in textile industry, the clarifying agent for glass, and it can play part of defoaming and increasing the gloss effect. As an anti-radiation protective wall material, it can be used in nuclear facilities, atomic power plants and X-ray laboratories, etc. to provide a good shielding effect. With the X-ray developing feature, it can be used in the medical developing fiber and the children's toys. For drains, speakers and audio, it can effectively cut off the noise. It can also be used in the synthesis of pharmaceutical chemicals, and the flavors and pigments industry.

Direct marketing can simplify transaction and provide more protections to customers. And the price moves higher which is mostly driven by middle business. All of the middle company have their owe profit goal, and will bring up the price. And for Precipitated Barium Sulfate, it has to consider the raw materials and equipment that related to. From the cost and service, customers may tend to direct marketing. Direct marketing is a vertical channel system and it should understand the needs of the customers and carry on the innovation and reform on the basis of integrating market resources. Direct sales
