Abstracts

Precipitated barium sulphate is a type of functional filler, which is widely utilized as a pigment extender in surface coating materials, and in the glass and rubber industries. Barium sulphate is superfine with a low oil absorption threshold, allowing for insulation and the prevention of agglomeration and flocculation, ultimately providing the benefit of improved pigmentation efficiency.

Precipitated barium sulphate downstream is wide, the major fields are powder coatings, rubber, plastic, inks, paper and others. In recent years, rubber industry has developed rapidly. Increasing demand for rubber is expected to drive the demand of the precipitated barium sulphate market. In recent years, Precipitated Barium Sulphate demand is promising, it is also used in inks industry, accounting for about 28.66% in 2015, but basically showing the scarcity of high-end products.
