## Abstracts

Genome editing or most profoundly called gene editing is a set of advanced tools and technologies that are involved in the alteration of a particular DNA sequence. Genome editing lets the scientists indulge in adding, removing, or altering a particular gene/genetic material at a precise location on the genome. The market has witnessed various types of approaches that fall under the umbrella of genome editing across the globe. These are Cas9 (CRISPR-associated protein 9), ZFNs (zinc-finger nucleases), CRISPR (clustered regularly interspaced short palindromic repeats), TALENs (transcription activator-like effector nucleases), and Antisense. A new addition to the list of technologies is the prime editing technology which was recently proposed i.e. in the early months of 2019. Famously called “search and replace” technology, prime editing is a genetic or DNA strand editing technology that can do gene base manipulation using the prime gene part of the DNA. Insertion, deletion, and base swapping are the major roles of this technology.

According to QYResearch’s new survey, global Prime Editing Technology market is projected to reach US\$ 2188.1 million in 2029, increasing from US\$ 1363 million in 2022, with the CAGR of 7.0% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Prime Editing Technology market research.

According to the Global Use of Medicines 2023 released by IQVIA Institute, the global drug expenditure in 2022 was about US\$1.48 trillion (excluding COVID vaccine and treatment-related expenses), and it is predicted to grow at a rate of 3%-6% in the next few years. In terms of drug expenditure, this number in China was about 166 billion dollars in 2022. It is expected that the expenditure on medicines will increase in the next

few years. From the perspective of demand, the trend of population aging, the increase of residents' wealth and the improvement of health awareness will drive the demand for medicines.
