Abstracts

The prosthetic liner acts as a sort of 'second skin' between the movable soft tissue of the residual limb (muscles, tissue, skin) and the hard shell of the socket. This reduces movement and friction between the skin and prosthetic socket and therefore reduces the forces in the socket described earlier. The prosthetic liner connects your residual limb to the prosthetic, cushioning the sensitive skin on the residual limb and thereby alleviating problems such as pressure points.

The technical barriers of Prosthetic Liners are high. The manufacturing bases relative concentration; some of the key players dominating this market are Ottobock, Ossur, Willow Wood, ALPS and others.
