Abstracts

Pyridine is a colorless to yellow liquid with an unpleasant smell. It can be made from crude coal tar or through chemical synthesis (the latter one is the mainstream production method presently).

Pyridine, as a basic organic chemical, is a versatile building block and excellent solvent in agrochemical, pharmaceutical and other industries.

Pyridine, completely soluble in water, alcohol, ether and benzene, is a versatile building block and excellent solvent in agrochemical, pharmaceutical and other industries.

Initially pyridines were isolated from coal tars; currently, above 95% of pyridines are got through chemical synthesis. The major raw materials to synthesize pyridines are acetaldehyde, formaldehyde and anhydrous ammonia.

USA, India, China and Japan are major production base of pyridine. Among those regions, China is the largest producer of pyridine, accounting for 46.51% market share in 2015. China begins to impose anti-dumping taxes on the imported pyridines from Indian and Japan from November of 2013 and the anti-dumping taxes will last for five years. Recently, China's Ministry of Commerce has lowered the anti-dumping taxes of an Indian company, Jubilant Life Sciences.

Agrochemical industry is the largest consumer of pyridine. Although some country have implemented bans on usages of paraquat and those bans impact the market of pyridine, pyridine industry still have market potential in other fields, such as pharmaceutical industry, cosmetics industry, paints, and so on.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Pyridine 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Pyridine 3900 industry.

Based on our recent survey, we have several different scenarios about the Pyridine 3900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 429.8 million in 2019. The market size of Pyridine 3900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
