## Abstracts

Rabies immunoglobulin (RIG) is a medication made up of antibodies against the rabies virus. It is used to prevent rabies following exposure.

According to QYResearch's new survey, global Rabies Immune Globulin market is projected to reach US\$ 694.4 million in 2029, increasing from US\$ 424 million in 2022, with the CAGR of 7.3% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Rabies Immune Globulin market research.

The Rabies Immune Globulin market is driven by the critical need to prevent and treat rabies infections effectively. Rabies immune globulin (RIG) is a key component of post-exposure prophylaxis, providing passive immunity against the virus. The increased awareness of rabies' potential severity, particularly in regions with higher prevalence rates, propels market growth. Additionally, the rising number of travelers and potential exposure to rabies in endemic areas contribute to demand. However, challenges include the limited availability of RIG in certain regions and the high cost associated with its production and administration. Ensuring timely access to RIG, especially in remote or resource-constrained areas, and addressing potential allergic reactions or adverse events are ongoing concerns. The market's success depends on the collaboration between healthcare systems and regulatory bodies to ensure sufficient availability, proper distribution, and affordability of rabies immune globulin, ultimately reducing the global burden of this deadly disease.
