Abstracts

Sensors, devices, or materials used to observe and study microscopic phenomena of nuclear radiation and particles. The working principle of the radiation detector is based on the interaction between particles and matter.

China's Radiation Detector industry has developed into a national wide status with certain research and production capacity, industry product mix has gradually improved. Currently, Japan has become international Radiation Detector large consumption country, but the production technology is relatively laggard, it can only produce some low-end product. Although the new production lines is increasing, the high-end product is still relying on import.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Radiation Detector 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
