## Abstracts

This report studies the global Rail market status and forecast, categorizes the global Rail market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa). This report is focus on the global rail market. Rail is the most important component of rail track system. The train will run on the parallel rails, carrying passengers and freight. Fixed on the sleepers, rails pass the load of trains to sleepers. Rails generally described and specified by their weight per unit length. The minimum weight per meter of rail required depends on the maximum axle load of the trains that will run on the track. Generally, the heavier the rails and the rest of the track work, the heavier and faster the trains these tracks can carry. Rails represent a substantial fraction of the cost of a railway line. Only a small number of rail sizes are made by steelworks at one time, so a railway must choose the nearest suitable size.

Rails are the most important components of rail track system. The development of rail market has a close relationship with railway industry, which is one of the major solutions of passengers and freight transport. In recent years, the global rail market enjoyed a growth rate as high as 5% (production).

In the last several years, developing regions are the major consumption market. To deal with the global economic crisis of 2008, China government have made mass infrastructure project, especially in rail infrastructure. With several years of development, China has the second longest rail line in the world and more than half of the high-speed rail in the global. And the rail market growth rate of China is slowing and stay on the global average level.

The global Rail market is valued at 660 million US\$ in 2017 and will reach 890 million US\$ by the end of 2025, growing at a CAGR of 4.3% during 2018-2025.
