Abstracts

Real-time bioprocess Raman analyzers are utilized for measuring nutrient and metabolic concentration in bioprocesses in real-time. It is achieved by using a single probe. Precisely, Raman analyzers are used significantly for measuring liquids, gas, solids, and also offer real-time quantification measurement for lactate, glutamate, osmolality, cell viability, total cell density, glutamine, and ammonium.

According to QYResearch's new survey, global Realtime Bioprocess Raman Analyzer market is projected to reach US\$ 1435.7 million in 2029, increasing from US\$ 886 million in 2022, with the CAGR of 7.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Realtime Bioprocess Raman Analyzer market research.

Laboratory analyzer is a typical high value-added, technology-intensive industry in the segmentation track of instrumentation industry, and the technology level has developed rapidly in recent years, and the laboratory analyzer industry has gained good momentum, and the market size has been increasing. Accompanied by environmental monitoring, food testing, biological medical testing and other areas of rapid development, the downstream application areas of laboratory analyzers continue to broaden the laboratory analyzers are widely used in the above areas, while in the product research and development, testing and other key links play an important role in the rapid development of high-quality for the industry to provide a strong foundation for the support of the rapid development of the industry. In addition, the expansion of downstream applications will bring considerable incremental demand for upstream laboratory analyzers, and will also put forward higher requirements for the performance, accuracy and efficiency of the instrument products, thus becoming the source of power
