# **Abstracts**

Recombinant DNA vaccine in this report refers to the vaccines manufactured using recombinant DNA technology. The advent of these vaccines has revolutionized the healthcare market. These vaccines are more effective, as well as have less side-effects associated with them as compared to traditional vaccines.

According to QYResearch's new survey, global Recombinant DNA Vaccine market is projected to reach US\$ 502.8 million in 2029, increasing from US\$ 186 million in 2022, with the CAGR of 15.3% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Recombinant DNA Vaccine market research.

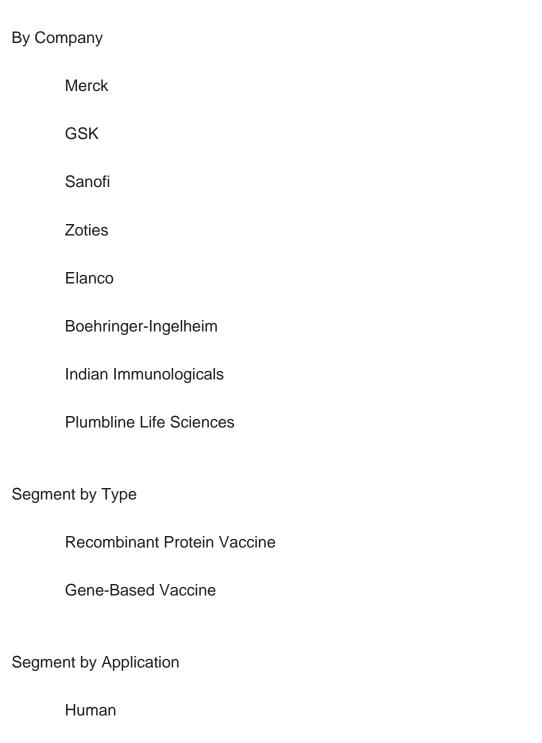

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive

to emerging public health needs.
