## Abstracts

Rectifier diode refers to the diode acts as rectifier with the main function of changing AC into DC and widely used in power rectifier circuit.

The main consumption regions are concentrated in the China, USA, Europe and Japan. The Rectifier Diode's consumption has great relationship with the local economical developed level and electric type production. Currently, the developing countries' grow rate has overcome the developed countries.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Rectifier Diode 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Rectifier Diode 4900 industry.
