Abstracts

Regenerative medicine is a branch of translational research in tissue engineering and molecular biology which deals with the 'process of replacing, engineering or regenerating human cells, tissues or organs to restore or establish normal function'. It is through the use of innovative medical means rebuilding diseased or damaged tissue or to support diseased or damaged tissue regeneration. The methods used include cell therapy, tissue engineering, chemically induced and therapeutic cloning, etc. Any combination of these technologies may be used to harness or stimulate the body's innate healing ability in order to treat a wide range of ailments, including musculoskeletal-related conditions, cardio- and peripheral vascular diseases, neurological disorders, stroke, non-healing wounds and ocular diseases.

Currently, some companies in the world can provide regenerative medicine service, mainly concentrating in USA. The main market players are DePuy Synthes, Medtronic, ZimmerBiomet, Stryker, Acelyty, MiMedx Group, Organogenesis, UniQure, Cellular Dynamics International, etc.

USA is the largest market of regenerative medicine, which occupies 51.09 percent of global regenerative medicine market share in 2015. It is followed by EU, which has around 16.66 percent of the global total industry. Other main regions which take important part in this industry include Japan and China.

According to the research, the most potential market in the main countries of regenerative medicine industry is Asia, determined by the rising level of medical care. Besides, South America, Middle East should also be focused by the investors. They are the potential consumers of regenerative medicine.

Despite the presence of competition problems, due to the huge industry profits, investors are still optimistic about this area; there will be more investments to enter the field.

The relatively-mature technology is cell transplantation; tissue engineering and

therapeutic cloning has its technical advantages, which is the direction of future research and development.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
