Smoke alarm, another name for smoke transducer, smoke sensors, etc. It is a device that detects smoke, typically as an indicator for fire. It can be used for fire prevention system, security system and other fields to detect fires before they become dangerous and to provide sufficient warning to occupants so they can escape. Smoke alarm was first used to space equipment. Later they are used in home and factories and other fields.

As for the United States residential smoke detector market, it will still show optimistic trend, and technological trends in the market will shift dramatically. Smart sensor vendors, like Birdi, Roost and Halo will ship their products in the second half year of 2016.

In West Europe, many countries have submitted new smoke detector regulations in recent year. For example, the greater part of Austria, the whole of France and many German states building regulations are updated this year to oblige smoke detectors in all homes, because warning about smoke or fire is offered by using Smoke detectors. In France, smoke detectors are mandatory in all homes from 8th March 2015. In Germany this regulation is called "Rauchmelderpflicht" (mandatory smoke detectors) for private homes. This obligation is currently different for the states Bavaria, Baden-Württemberg and North-Rhine-Westphalia. In the future, this trend may be transformed to East Europe countries, and the consumption of smoke alarm will be showing an upward tendency.
