## Abstracts

This report studies the global RF Amplifier Chips market status and forecast, categorizes the global RF Amplifier Chips market size (value & volume) by manufacturers, type, application, and region.

This report focuses on the top manufacturers in United States, Europe, China, Japan, South Korea and Taiwan and other regions.

This report studies the RF Amplifier Chips market, A RF amplifier chip is an integrated circuit that amplifies Radio Frequency (RF) signals with frequencies ranging from low MHz to 10+ GHz. RF amplifier chips exist in almost all wireless communications systems such as smartphones, GPS receivers and satellite receivers. Typically the RF signal received from the antenna is amplified by the low noise amplifier (LNA) before passing through to other blocks within the RF receiver (filter, Analog-to-digital converter, etc.). LNAs introduce minimal noise in order to maximize the signal-to-noise ratio (SNR). The second family of the RF amplifiers is the power amplifier (PA), typically part of the transmitter path of the RF signal chain. PAs have high gains and are known for their high Shipment power capabilities.

Some key RF amplifier specifications are: gain, gain bandwidth, noise figure and 3rd-order intercepts. The RF amplifier gain is specified in units of dB, defined as the ratio of the Shipment power to the input power. The gain bandwidth is the bandwidth for which the RF amplifier has this gain. The noise figure of an RF amplifier is a parameter that determines the added noise to the overall signal. Finally, the third-order intercept (IP3 or TOI) is a parameter that determines the linearity of the amplifier.

RF Amplifier Chips industry is relatively concentrated; manufacturers are mostly in the North America and Asia-Pacific. Among them, China Shipment value accounted for more than 39.10% of the total Shipment value of global RF Amplifier Chips in 2016. Skyworks is the world leading manufacturers in global RF Amplifier Chips market with

the market share of 26.38%, in terms of revenue in 2016. Compared to 2015, RF Amplifier Chips market managed to increase sales revenue by 3.10% to 4647.85 million USD worldwide in 2016 from 4507.99 million USD in 2015. With the increasing in production capacity, expected that the RF Amplifier Chips raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of RF Amplifier Chips.

The global RF Amplifier Chips market is valued at 4810 million US\$ in 2017 and will reach 5320 million US\$ by the end of 2025, growing at a CAGR of 1.3% during 2018-2025.
