## Abstracts

This report studies the global RF Switches market status and forecast, categorizes the global RF Switches market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

RF switches are used extensively in wireless systems for signal routing finding wide use in switching signals from antennas to the transmit and receive chains. They are one of the highest volume RF devices in use today as several devices are typically contained in a block diagram. RF switches fall into the two main categories of electromechanical and solid-state switches. While electromechanical switches have not found wide use in RF applications since the PIN diode was developed, they are making some new inroads in certain applications in the form of micro-electromechanical systems (MEMS) devices. Solid state switches are typically more reliable and exhibit longer lifetime than electromechanical switches plus offer faster switching times. However, solid-state switches typically have higher intrinsic ON resistance and more harmonic distortion than mechanical switches. Solid state switches: There are two main types of solid state switches: field-effect transistors (FETs) and PIN diodes.

With the increasing in production capacity, expected that the RF switches raw material price will be stable in the short term. However, the improvement of energy, transportation costs, and labor costs, will play a significant role in promoting the cost of RF switches.

There are companies aims at the cost and quality leadership which shall improve profitability. As the same time, companies are focusing on technological innovation, equipment upgrades, and process improvements, to reduce costs and improve quality. The average price of RF switches will fall further. The product average price declined in the past few years due to the technology development, the average price will keep this

trend in the few future years due to increasing mature manufacturing technology, cost of raw materials, as well as the substitute threat.

The global RF Switches market is valued at 2950 million US\$ in 2017 and will reach 4870 million US\$ by the end of 2025, growing at a CAGR of 7.4% during 2018-2025.
