Abstracts

Rigid insulation is a building material used to provide thermal resistance to walls, foundations, and roofs. It is available in formed or extruded sheets of varying sizes, which are made from polystyrene or polyurethane. This material helps to improve the energy efficiency of a home by keeping cold or hot air from penetrating the walls. The thermal resistance of rigid insulation is measured by the material's R-value. Higher R-values mean that the material is more resistant to temperature transfer, while low R-values mean that air can easily pass into or out of the home.

DOW accounted for 31.08% of the United States Rigid Insulation market share in 2015. Other players accounted for 31.10%, including Owens Corning, Insulfoam (CCL). DOW and Owens Corning dominated Extruded polystyrene (XPS) market; Insulfoam (CCL) dominated Expanded polystyrene (EPS) market.
