This report studies the Robotic Pool Cleaner market. A robotic pool cleaner is a unit that runs from an outside power source rather than your pool's filtration system. It is sort of like a Roomba for your pool. They run on wheels or tank treads and have removable filter bags that you take out and clean after each use.

Robotic pool cleaners work independently from the filter and pump and are driven by an electric motor inside the unit. They are self-contained, collecting debris in a filter canister within the cleaner. Robotic pool cleaners have built-in intelligence that ensures they don't get stuck in corners and on steps and provide better coverage than alternative cleaners.

According to the database of QYR Electronics Research Center, the United States Robotic Pool Cleaner markets has a total value of 81.83 M USD back in 2012, and increased to 188.25 M USD in 2016. We made a series of functional calculation and deduced the past 5 year's data with scientific model.
