## Abstracts

The rotary limit switch is used to control the movement of industrial machinery. It operates as an auxiliary controller of electrical motors through a power interface, such as a contactor or PLC. Suitable for heavy duty, its shaft is connected to the motor and, after a set number of revolution, the cams operate the switches, thus starting the predetermined movement. A worm gear and a helical toothed gear combined with one or more pairs of straight toothed gears are used for the transmission of the movement from the input shaft to the output shaft.

Tecno Elettrica Ravasi, AMETEK STC and Giovenzana the top three production value share spots in the Rotary Limit Switch market in 2016. Tecno Elettrica Ravasi dominated with 41.63% production value, followed by AMETEK STC with 13.41% production value share and Giovenzana with 11.03% production value share.
