## Abstracts

Natural rubber has poor qualities for it to be used commercially. Hence it is treated with various procedures and different rubber reinforcing chemicals to enhance its properties such flexibility, durability, and its ability to withstand temperature.

According to QYResearch's new survey, global Rubber Reinforcing Chemical market is projected to reach US\$ 1097.5 million in 2029, increasing from US\$ 733 million in 2022, with the CAGR of 6.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Rubber Reinforcing Chemical market research.

Plastic additives, also known as plastic additives, are some compounds that must be added to improve the processing performance of polymers (synthetic resins) or to improve the performance of the resin itself when it is molded. Plastic additives is an associated industry of the plastics industry, and its development level is closely related to the development of the plastics industry. At present, the world's enterprises engaged in the production of plastic additives are distributed in Asia, Europe, the United States and other continents. Due to their strong financial strength, broad technology, and long time in related industries, large international manufacturers are mostly engaged in the production of various plastic additives. The chain is longer, and the production of high-end plastic additives accounts for a large proportion. Due to the low cost of labor in Asia and the huge market size, the world's plastic additives industry has gradually shifted to Asia, and Asia, especially China, has gathered most of the manufacturers. Therefore, China has played an important role in the rapid growth of plastic additives in recent years, becoming the largest and fastest growing market in the world. In recent years, with the wide application of plastics, the global plastic additives industry has achieved

rapid growth. In the past few years, the demand for plastic additives in the world has continued to grow at an average annual rate of about 3-4%. The average annual growth rate of demand in Europe, North America and Asia Pacific (excluding China) is 3%. The average annual growth rate of plastic additives in China The growth rate is as high as 8%-10%, and the average annual growth rate of demand in other regions is 5%-6%. It is predicted that in the next period of time, the plastic additives market will still grow at a rate of 3%-4%.
