Abstracts

Running Shoes are footwear designed for off-road travel and include many design features not found on a road-specific model. Running Shoes involve running or walking in an outdoor environment on a natural terrain, taking advantage of the geographical features offered by each region.

Running events are becoming more popular, and for competition it is even more important than ever to be light on your feet and quick. For this reason running shoes are designed to tackle hard impacts, but are also lightweight and airy.

Currently, the main material of running shoes is mesh fabric, EVA, rubber, glue and others. But different manufacturers will choose raw materials with special functions. The main consumption group is outdoor enthusiasts.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Running Shoes 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Running Shoes 3900 industry.
