## Abstracts

Sarcopenia is a type of muscle loss (muscle atrophy) that occurs with aging and/or immobility.

According to QYResearch's new survey, global Sarcopenia Supplement market is projected to reach US\$ 3670 million in 2029, increasing from US\$ 2762.8 million in 2022, with the CAGR of 4.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Sarcopenia Supplement market research.

The Sarcopenia Supplement market is primarily driven by the aging global population and the increasing awareness of age-related muscle loss. Sarcopenia supplements, designed to support muscle health and prevent muscle deterioration, cater to the growing demand for proactive approaches to healthy aging. The desire to maintain mobility, independence, and overall quality of life among the elderly population contributes to market growth. However, challenges include the need for well-researched and evidence-based formulations that effectively address muscle loss. Navigating regulatory requirements and ensuring consumer trust in supplement efficacy are ongoing concerns. Moreover, the market faces competition from various dietary and lifestyle interventions for muscle health. The market's success hinges on scientific advancements in supplement formulation, rigorous clinical testing, and educational efforts to inform both consumers and healthcare professionals about the benefits and appropriate use of sarcopenia supplements.
