Satellite height is a major factor in its utility for use within a communications system. It determines the orbit period, the time that the satellite is visible to a ground station, the footprint (coverage area on earth's surface), the propagation delay of signals to and from the satellite, and the path attenuation. There are three categories of distance from the earth for satellite orbits and accordingly satellites, which are Low Earth Orbit (LEO), Medium Earth Orbit (MEO) and Geostationary Earth Orbit (GEO). These have various characteristics and offer advantages as well as disadvantages.

In the coming years there is an increasing demand for Satellite Manufacturing and Launch in the regions of US and Europe that is expected to drive the market for more advanced Satellite Manufacturing and Launch. Growth in government budgets in the principal countries, increasing of communications satellites expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology will drive growth in United States and Europe markets.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Satellite Manufacturing and Launch market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
