Abstracts

A scaffold is a temporary structure specifically erected to support access or working platforms. Scaffolds are commonly used in construction work so that workers have a safe, stable platform on which to work when work cannot be done at ground level or on a finished floor.

As international economic situation is complicated, in the next few years there will be many uncertainties although. Due to the government' policy and the high sales of Scaffolding in the international market, the current demand for Scaffolding product is relatively high in the mature market, such as North America and EU, but the demand in China is relatively higher due to the downstream demand.

For industry structure analysis, the Scaffolding industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top ten producers account for about 33.24% of the sales value. Regionally, Europe is the biggest sales value of Scaffolding, also the leader in the whole Scaffolding industry.

China occupied 37.09% of the sales volume market in 2015. It is followed by Europe and North America, which respectively have around 26.26% and 23.38% of the global total industry. Other countries have a small amount of production.

Although sales of Scaffolding brought a lot of opportunities, the study group recommends the new entrants who just having money but without technical advantage and downstream support, do not to enter into the Scaffolding field hastily.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
