Abstracts

Semiconductor silicon wafers are key component of integrated circuits such as those used to power computers, cell phones, and a wide variety of other devices. A silicon wafer consists of a thin slice of silicon which can be treated in various ways, depending on the type of electronics that is being used. Silicon has a very high quality semiconductor, making it ideal for the production of such circuits.

Due to the increase in global DRAM and 3D NAND Flash shipments in 2016 and the limited capacity of silicon international manufacturers, coupled with the large-size silicon project failed to achieve shipments in mainland, resulting in global semiconductor wafer supply tight. The capacity utilization of major wafer suppliers reached 100%.

In 2016, the 300mm wafers are the main products of the semiconductor silicon wafer market with a share of 65%.

The downstream, foundry market, which has high capital and technical barriers, has got a mature market structure these previous years. TSMC, GF, UMC, Samsung, and SMICS etc. are the leading foundries in the world.

Despite the present problem of competition in the market, the global recovery trend is clear that, investors are still optimistic about this area. In the future they will still have Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Semiconductor Silicon Wafer 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events

restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Semiconductor Silicon Wafer 3900 industry.
