Abstracts

The sense cable is a kind of signal transmission tool. Generally, the signal transmitted by the sensor is very weak. In order to avoid signal interference, the signal cable has a shielding layer outside, and the shielding layer of the wrapped conductor is generally a conductive cloth, a braided copper mesh or a copper pouch (Aluminum), the shielding layer needs to be grounded, and external interference signals can be introduced into the earth by this layer to avoid interference signals entering the inner conductor interference and reduce the loss of transmission signals.

According to QYResearch's new survey, global Sense Cable market is projected to reach US$ 1741.3 million in 2029, increasing from US$ 1496 million in 2022, with the CAGR of 2.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Sense Cable market research.
