## Abstracts

Shortstop inhibitor is used in the manufacturing process of unsaturated polyester resins and epoxy resins to control polymerization reactions. Shortstop inhibitor is also used in the filtration process at low vapour pressure. In the composite industry, shortstop inhibitors are used to control the polymerization process. In the chemical industry, it is used to suppress the monomer reaction of ethylene, vinyl acetate and other chemicals.

According to QYResearch's new survey, global Shortstop Inhibitor market is projected to reach US\$ 635.3 million in 2029, increasing from US\$ 429 million in 2022, with the CAGR of 5.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Shortstop Inhibitor market research.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
