## Abstracts

Side channel blowers : One kind of fan from our range is our side channel blowers, directly-driven or belt-driven fans which are made of aluminium alloy and provides very high pressure and vacuum. Example of applications, working on pressure, are air beds, air tables, air knives, plating, ice prevention systems, component drying and film scrap collection. Other examples, working on vacuum, are industrial vacuum cleaners, bulk material handling, central dust extraction, chip removal, pneumatic tube plants, industrial sewing machines, commercial ironing machines, drying installations, dental applications, vacuum transport of waste and more. One example of energy savings are when customer applications of compressors can be replaced with our side channel blower. If this change is applicable depending on customers working point, an energy savings of over 90% can be achieved. Depending on the client application and the desired working point, we have a wide range of both direct driven and belt-driven side channel blowers. We also manufacture customized special fans. We offer a wide range of complete accessories, such as threaded flanges, welding flanges, connectors, silencers, pressure and vacuum relief valves, inlet filters, bends and more.
