## Abstracts

Selective laser sintering (SLS) is a SLS method which uses infrared laser as energy source. During processing, the powder is first preheated to a temperature slightly below its melting point, and then the powder is smoothed out under the action of a scraping stick. Under the control of the computer, the laser beam is selected to sintering according to the section information of the layers. After the completion of one layer, the next layer of sintering is carried out. After all the sintering is finished, the redundant powder is removed, and a sintered part can be obtained. Selective laser sintering (SLS) is an additive manufacturing technology that converts powdered plastic materials into solid structures using a 3d-based model using a laser. It uses high-energy laser beams to transform particles into complex structures. Two important and common powder beds are selective laser sintering and direct metal laser sintering. SLS devices can seek prototypes and final products at the time of printing without seeking support.

According to QYResearch's new survey, global SLS 3D Printer market is projected to reach US\$ 2388.5 million in 2029, increasing from US\$ 1353 million in 2022, with the CAGR of 8.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole SLS 3D Printer market research.

3D printing, also known as additive manufacturing, is a manufacturing method based on a digital model file, using powdered metals, plastics and other materials to lay out the print layer by layer, and finally form a three-dimensional object. Currently, it has been gradually applied in industrial design, aerospace, construction, medical and other fields to print models, parts and even final products. According to our research, the global 3D printing market size is about \$15.3 billion in 2022, with the highest share coming from 3D printing services. The industry that uses 3D printing the most is the automotive industry, which is a distant second, followed by the consumer/electronics sector and

aerospace. The current global 3D printing head players are mainly concentrated in the US.
