Abstracts

A smart temperature transmitter is a type of temperature transmitter which provides several benefits including wireless data transmission, maintenance indicator, device health indicator, increased safety, dual input facility, along with the conversion of temperature signals received from various temperature sensors. The temperature transmitter amplifies and converts the temperature signals received from thermocouples, resistance temperature detectors (RTD), negative temperature coefficient (NTC) thermistors, or from any other temperature sensors.

According to QYResearch's new survey, global Smart Temperature Transmitter market is projected to reach US$ 1410.8 million in 2029, increasing from US$ 836 million in 2022, with the CAGR of 7.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Smart Temperature Transmitter market research.

According to our research, the global Electronic Components market is approximately USD 466.61 billion in 2022. The Asia-Pacific region is a major market for electronic components. The downstream application fields of the electronic components industry are extensive, including communication equipment, consumer electronics, automotive electronics, smart home, industrial control, military security and other fields. Unlike the strong industry demand in 2021, downstream industry demand in 2022 showed a differentiated trend. The demand for traditional electronic applications represented by mobile phones and computers has turned weak, which has a greater impact on the demand of the entire industry; the demand for communication equipment and data centers has maintained growth but slowed down, and the industrial and Internet of Things driven by digital transformation and the development of artificial intelligence
