Abstracts

This report studies the global Smart Water Management market status and forecast, categorizes the global Smart Water Management market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).
A smart meter is usually an electronic device that records consumption of electric energy in intervals of an hour or less and communicates that information at least daily back to the utility for monitoring and billing. Smart meters enable two-way communication between the meter and the central system. Unlike home energy monitors, smart meters can gather data for remote reporting. Such an advanced metering infrastructure differs from traditional automatic meter reading in that it enables two-way communications with the meter.
With the development of network technology, especially the rise of the Internet of things technology, new technology related to the smart water meter (terminal) emerges in an endless stream, mainly including: wireless or wired network technology, network communication protocol and routing technology, network access technology, data security and reliability technology, data acquisition and management technology, automatic meter reading and selling water management system technology, etc.

The global Smart Water Management market is valued at 1950 million US$ in 2017 and will reach 4450 million US$ by the end of 2025, growing at a CAGR of 12.5% during 2018-2025.
