Snorkeling doesn't require much gear, compared to scuba diving. But the lower amount of gear doesn't make selecting that gear any less important.

The low training cost associated with snorkeling activity will drive the growth prospects for the global snorkeling equipment market during the forecast period. Snorkeling is a popular recreational activity that can be enjoyed by anyone who has access to the ocean, lake, a river, or a pond. Unlike other activities such as the scuba diving, it does not require any complicated equipment, training, and certifications and is one of the major factors that fosters the market's growth. Snorkelers float on the surface of the water and require a mask to clearly view the underwater world, a snorkel to breathe on the water surface, and fins to enable propulsion. Furthermore, another activity known as the skin diving is a specific kind of snorkeling that requires the divers to hold their breath underwater to observe aquatic life and explore marine species. Several training courses are available to instruct skin diver enthusiasts such as the Professional Association of Diving Instructors (PADI) Skin Diver. Some of the techniques that are covered by the course are checking buoyancy, surface swimming, clearing water from the snorkel, and performing effortless surface dives.
