## Abstracts

Sodium hypochlorite (NaOCl) is a compound that can be effectively used for water purification. It is used on a large scale for surface purification, bleaching, odor removal and water disinfection.

The global 2010-2015 Fatty Amine price is in the first rising and later-decline trend, from about 110\$/MT in 2010 to 99\$/MT in 2015, with the future capacity growth and raw material changes, prices will be in decline trend.

The global 2015 Fatty Amine Production will reach 13500 K MT from 12400K MT in 2010.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this area; the future will still have more new investment enter the field.

Although sales of Fatty Amine brought a lot of opportunity, the study group recommends the new entrants just having money but without technical advantage and downstream support do not to enter into the Fatty Amine field.
