## Abstracts

Solar encapsulation materials are encapsulant sheets that protect the solar cell to ensure its performance and reliability. Solar encapsulation materials should be stable at elevated temperatures and high UV exposure. They should also be able to provide good optical and electrical transmissivity.

As an important encapsulant, solar encapsulation materials are widely used in PV module. They are generally classified into several types according to the resin used in the material. EVA sheet is the largest type taking 97.23% of the total solar encapsulation materials production in 2016. PVB sheet is another kind of solar encapsulation materials, which only took 1.57% of the total production.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
