This report studies the global Solar Encapsulation Materials market status and forecast, categorizes the global Solar Encapsulation Materials market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

Solar encapsulation materials are encapsulant sheets that protect the solar cell to ensure its performance and reliability. Solar encapsulation materials should be stable at elevated temperatures and high UV exposure. They should also be able to provide good optical and electrical transmissivity.

As an important encapsulant, solar encapsulation materials are widely used in PV module. They are generally classified into several types according to the resin used in the material. EVA sheet is the largest type taking 97.23% of the total solar encapsulation materials production in 2016. PVB sheet is another kind of solar encapsulation materials, which only took 1.57% of the total production.

The technical barrier of making high-quality solar encapsulation materials is high, and the market concentration degree is also relatively high. Major companies in solar encapsulation materials market include First, STR, Bridgestone and MITSUI. Those four players occupied 69.51% of the global production in 2016.

With the fast improvement of PV module industry, the consumption of solar encapsulation materials is expected to grow during the forecast period of 2018-2023. Solar encapsulation materials industry will increase in a huge growth space.

The global Solar Encapsulation Materials market is valued at 1630 million US\$ in 2017 and will reach 1860 million US\$ by the end of 2025, growing at a CAGR of 1.7% during 2018-2025.
