Abstracts

solid bleached sulphate (SBS) is a high-performance paperboard grade traditionally manufactured using virgin fiber combined with the kraft bleaching process, resulting in superior cleanliness, print surface, brightness and converting performance.

According to QYResearch's new survey, global Solid Bleached Sulphate Board market is projected to reach US\$ 9395 million in 2029, increasing from US\$ 8045 million in 2022, with the CAGR of 2.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Solid Bleached Sulphate Board market research.

The solid bleached sulfate (SBS) board market is driven by the increasing demand for high-quality and sustainable packaging solutions. SBS board, known for its excellent printing capabilities, stiffness, and brightness, is extensively used in packaging various consumer goods, including cosmetics, pharmaceuticals, and premium food items. The market growth is further propelled by the rising e-commerce industry and the need for attractive and protective packaging for products during transit. Additionally, the growing emphasis on eco-friendly packaging solutions encourages the adoption of SBS board due to its recyclability and biodegradability. However, challenges persist, such as the competition from alternative packaging materials and digital distribution methods that can reduce the demand for physical packaging. Fluctuating raw material costs and environmental concerns associated with the production of SBS board also pose challenges for manufacturers. To thrive in this market, stakeholders must address these challenges, emphasize sustainability, and consistently deliver high-quality packaging solutions to meet the evolving preferences of both businesses and consumers.
