Abstracts

Solid Phase Extraction (SPE) Equipment is the equipment for separation, purification and enrichment of samples. The main purpose is to reduce sample matrix interference and improve detection sensitivity.

The extraction agent of the solid phase extraction method is a solid, and its working principle is based on: the action strength of the component to be measured and the coexisting interference component in the water sample are different on the solid phase extraction agent, so that they are separated from each other.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Solid Phase Extraction (SPE) Equipment market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.
