## Abstracts

Spherical Active Carbon body structure is a spherical shell containing at least one layer made of activated carbon material. The spherical shell is a spherical core body, which can be made of inorganic materials different from the spherical shell material 10mm, the wall thickness of the spherical shell is not less than 0.5mm, preferably 1-1.5mm.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Spherical Active Carbon market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Spherical Active Carbon industry.
