Abstracts

A hard wood mainly used to make furniture

According to QYResearch's new survey, global Spruce Wood market is projected to reach US\$ 555.3 million in 2029, increasing from US\$ 403 million in 2022, with the CAGR of 5.1% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Spruce Wood market research.

According to the decree signed by Federal Agriculture Minister Julia Klöckner on April 14, the felling of spruce should be reduced to 85%. This applies retrospectively for the period from 1 October 2020 to 30 September 2021 – the so-called Forestry Year 2021. The basis for calculating how much timber forest companies are allowed to harvest is the years that have been harvested between 2013 and 2017, 85% of which is calculated. What is not considered is damaged wood such as bark beetle, avalanche or storm damage. Affected by the Act, timber harvesting in Germany will be subject to certain restrictions, while downstream demand for timber is still rising steadily.
