## Abstracts

This report studies the global Stationary Emission Control Catalyst market status and forecast, categorizes the global Stationary Emission Control Catalyst market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Emission control catalysts are now used on all types of internal combustion engines, as well as in a number of stationary applications. Catalytic reactors for mobile applications, known as catalytic converters, utilize catalyst-coated monolithic substrates. Terms which are used to characterize the catalyst performance include conversion efficiency, light-off temperature, and space velocity.

The importance of emission control catalysts has been increasing as environmental concerns and measures to fight pollution have become more important globally. Emission control catalysts are divided into two types according to the source of the emission: emission control catalysts for mobile sources (such as automobile catalysts) and for stationary sources. The largest part of the market is the mobile emission catalyst segment; the stationary emission catalyst market is smaller.

Following the success in mobile engine applications, catalyst technologies were introduced for stationary applications, for the control of volatile organic compounds (VOC) and NO<sub>x</sub> emissions. The list of catalyst applications covers such emission sources as chemical plants, painting and coating processes, ovens, printing, dry cleaning, power generation, and, last but not least, stationary engines. Examples of catalyst technologies for stationary engines include non-selective catalytic reduction (NSCR) of NO<sub>x</sub> from rich burn natural gas engines and selective catalytic reduction (SCR) of NO<sub>x</sub> by ammonia from diesel engines.

USA is the largest consumption country of Stationary Emission Control Catalyst products in the world in the past few years while the market share increased to about

20.53% in 2015 from 24.85% in 2011.

The global Stationary Emission Control Catalyst market is valued at 550 million US\$ in 2017 and will reach 590 million US\$ by the end of 2025, growing at a CAGR of 1.0% during 2018-2025.
