Abstracts

Structural fumigation is a pest control method that involves filling the airspace within a structure with a toxic gas. A tarp, or tent, is used over the structure to trap the gas inside. The gas penetrates cracks, crevices, and pores in the wood to eliminate pests, such as drywood termites and bed bugs. After the tarp is removed, fans are used to help the gas escape into the atmosphere. Leftover residues are not expected to remain on surfaces.

According to QYResearch's new survey, global Structural Fumigation Service market is projected to reach US\$ 481.3 million in 2029, increasing from US\$ 283 million in 2022, with the CAGR of 7.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Structural Fumigation Service market research.

Pest control (pest control) is to mitigate or prevent pathogenic microorganisms and pests from harming crops or humans and animals, and man-made means, generally can be divided into chemical control using chemicals such as insecticides and physical control using physical energy such as light or rays, or the construction of barriers. According to our research, the global pest control market size will be approximately USD 22 billion in 2022. The key global professional pest control key players are Rollins, Ecolab, Rentokil, Anticimex and others. Whether it is your home, factory or company or an entertainment and dining place, the presence of pests such as cockroaches termites rats and mice is not an easy thing to solve. As times change, these pests have evolved to be more and more drug resistant, which requires companies to constantly update new control chemicals and programs, which is the basis for the industry's perpetual demand and continued prosperity.
