Abstracts

Structural steel is a category of steel used as a construction material for making structural steel shapes. A structural steel shape is a profile, formed with a specific cross section and following certain standards for chemical composition and mechanical properties. Structural steel shapes, sizes, composition, strengths, storage practices, etc., are regulated by standards in most industrialized countries.

Structural steel has many uses in the modern world, but the application most associated with it is in construction. It is one of the most vital materials used in building, favored for a number of reasons, the main being its versatility, relatively low production cost, high strength, sustainability and availability. Structural steel is categorized into shapes, each with their own compositional properties that are regulated by standards, which differ between different countries.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
