Abstracts

Sulfosuccinates are metal (sodium) salts of alkyl ester of sulfosuccinic acid. Sulfosuccinate surfactants possess excellent foaming, wetting, emulsifying, and solubilizing properties. Additionally, these surfactants exhibit high surface activity, biodegradability, and low critical micelle concentration. They are used in various types of cleansing formulations, household detergents & cleaners, industrial cleaners, textiles, pharmaceuticals, polymers, paints & coatings, leather, printing, and agriculture. Surfactants may act as detergents, wetting agents, emulsifiers, foaming agents, and dispersants. There are a variety of surfactants on the market. Sulfosuccinates are considered very mild, with good foaming and detergent properties. Considering the cost, companies may choose cheap anionic surfactants to replace sulfosuccinates, especially in developing countries.
