Abstracts

Sustainable Nonwovens are made from recycled materials. The percentage of such fabric of course varies depending on the strength needed. However since they are recyclable means that they cause little or no pollution and thus is great for our environment.

According to QYResearch's new survey, global Sustainable Nonwoven market is projected to reach US\$ 751.4 million in 2029, increasing from US\$ 423 million in 2022, with the CAGR of 8.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Sustainable Nonwoven market research.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
